- Subject:** Free Webinar by United Way Mumbai on Marine Pollution
- From:** Mitali Mutta
- Date:** Thu, Sep 2, 2021, 4:13 PM
- Content:**

Dear Dr. Zeenat, Greetings from United Way Mumbai! There is a dire need to create awareness on marine pollution especially when we are living in a city which h...

Dear Dr. Zeenat,

Thank you for your confirmation of the Marine Pollution session on **13th September, time 4:00 p.m. to 5:30 p.m.**

Kindly, go through the short note on the work we do for marine conservation across Mumbai:

United Way Mumbai (UWM) has been actively involved in clean-up activities and has worked closely with the Mumbai Municipal Corporation on spreading civic awareness. Through our initiative Clean Shores Mumbai, we strive to enhance the overall cleanliness and waste management at the city's beaches and contribute towards mitigation of marine pollution and conservation of the marine ecosystem through strategic and sustained interventions, enabled by a public-private partnership. You can find more at <https://www.unitedwaymumbai.org/cleanshores>.

About speakers:
Pooja Shinde, an environmentalist by profession and Mitali Mutta, a social worker by profession are working with the Environment Team of Community Impact under United Way Mumbai.

As discussed, you will let me know regarding the digital platform and accordingly we would conduct the session.

A screenshot of a desktop Google Meet interface. The browser address bar shows 'meet.google.com/zyk-xswu-fcj'. The presentation slide is titled 'Types of Marine Pollution' and 'Eutrophication/Nutrient Pollution'. It features a diagram of a water body over time, illustrating the cycle of eutrophication:

- 1. Nutrient load up:** excessive nutrients from fertilisers are flushed from the land into rivers or lakes by rainwater.
- 2. Plants flourish:** these pollutants cause aquatic plant growth of algae, duckweed and other plants.
- 3. Algal blooms, oxygen is depleted:** algal blooms, preventing sunlight reaching other plants. The plants die and oxygen in the water is depleted.
- 4. Decomposition further depletes oxygen:** dead plants are broken down by bacteria (decomposers), using up even more oxygen in the water.
- 5. Death of the ecosystem:** oxygen levels reach a point where no life is possible. Fish and other organisms die.

 The diagram also shows 'sunlight', 'algae layer', and 'nutrient material'. The slide is presented by 'Mitali Mutta'. The right sidebar shows a grid of participants: Mitali Mutta, Pooja Shinde, AFFAN BHATI, Arif Ali, Qurratulayn Sayyed, SHIFA SURVE, 13 others, and You. The bottom of the screen shows a Windows taskbar with the time 4:58 PM and date 13-09-2021.
